

HOSECO

High Pressure Drilling and Production Hoses

Fluid Technology

HOSECO
exclusive Australian agents of

Continental 
CONTITECH

As the exclusive Australian distributor agents for Continental Contitech, Hoseco can assist with any queries and sales regarding the contents of this catalogue

Hoseco are the exclusive Australian agents for Continental Contitech who are recognised as a world leader in the design, manufacture and supply of flexible hoses, couplings and fluid transfer systems to the Oil and Gas Industry. Continental Contitech, which is now a wholly owned subsidiary of Continental AG, began trading over 45 years ago and has modern manufacturing facilities at its Ashington headquarters and also in Aberdeen.

Hoseco, in conjunction with Continental Contitech, is capable of offering a comprehensive range of products and services, from flexible hose assemblies to complete fluid transfer systems. The products and services offered are split into four main business areas "Hose and Couplings", "High Pressure Drilling and Production Hoses", "Fluid Handling Systems" and "Hose Management".

Experienced engineering and project management teams meet customer requirements from conceptual stage to the delivery of fully integrated hose systems.

Hoseco, in conjunction with Continental Contitech, can also provide installation and commissioning services, and provide training of client's personnel for

both onshore and offshore projects. All products supplied are backed by extensive research and development.

Continental Contitech is structured to provide a worldwide service that enhances their reputation of consistently providing innovative solutions through practical design. Quality, Safety and Environmental issues are of prime importance to Continental Contitech and Hoseco holds the following approvals; LRQA Quality Management System approval to ISO 9001:2000, Environmental Management System Standard ISO 14001:2004, Health & Safety Standard OHSAS 18001:2007 and Lloyds Register Verification to Pressure Equipment Directive 97/23/EC.

In conjunction with Continental Contitech, Hoseco has extensive experience in the supply of High Pressure Drilling and Production Hoses. The high pressure hoses supplied are manufactured at Hoseco Rubber Industrial (formerly known as Taurus Emergé) in Hungary and Dunlop Oil & Marine, in Grimsby, England. Continental Contitech has tailored high pressure hoses for the most arduous applications world-wide in both topside and subsea services, and is the world's leading manufacturer and supplier of bonded high pressure drilling and production hoses certified to API 7K FSL Levels 0, 1 and 2, API 16C and API 17K, and also of hose conforming to API RP 17B.

High Pressure Drilling and Production Hoses

Continental Contitech has over 25 years of experience supplying high pressure hoses to internationally recognised Oil & Gas companies, for installation on various projects around the world. Hoses are manufactured utilizing state of the art technology to ensure maximum reliability and availability for critical applications in the exploration and production of oil and gas.

Continental Contitech's high pressure hose technology is backed up by an experienced design and applications team to offer custom a total solution ranging from feasibility/conceptual studies to dynamic analysis, hose management and training.

Hose Range

Size: 2" to 20" diameter
Working Pressure: Up to 15,000 psi
Operational Temperature: Up to 121°C

Application:

- Choke & Kill
- Cement
- Acidizing
- Rotary
- Tensioner
- Jumper
- Drag Chain
- Production
- Special Applications

The single body rubber bonded hose has a number of features which ensure a high quality, high integrity product. These include built in one-piece end couplings with integral built in bend limiters and a composite fire resistant layer protecting both hose body and coupling. These features combine to provide a hose with low minimum bend radius, a light compact construction with excellent flexibility and fatigue resistance. Hose designs are available to accommodate external collapse, chemical resistance, heat insulation, fatigue resistance and continuous lengths up to 150 ft.
